## AUTOMATIC COMMERCIAL SLIDE DOORS

### Emergency Breakaway and Manual Locking

A5.6

Jan 08

#### Emergency Breakaway

Continuous interlocking breakout mechanism provides for an emergency breakout feature on 'SX' Slide/Swing panels for Types 110 and 310 units.

#### Ball Catch Latch

A ball catch latch releases when approximately 45 lbs pf pressure is applied at the interior lock stile.

#### Maximum Security Locking

A lockbolt locks the swingout operation of the sliding panel into the top of the carrier frame (as an option, the lockbolt can be made to lock down into the threshold).

An additional hookbolt latches into the jamb or adjacent door panel.

Both are simultaneously operated by a thumbturn or keylock.

This is standard on doors with the emergency breakout feature.
